

TELESCOPIC PAINT POLE

Designed for underground mining

The Telescopic Paint Pole is a compact marking tool designed specifically for underground mining. Its extendable handle allows customers to mark inaccessible areas like rock wall faces and at any unreachable height safely and accurately with inverted aerosol paint, improving ergonomics and efficiency in confined spaces.

-  Telescopic Design
-  Upright / inverted Spray Can
-  Lightweight Construction
-  Durable Locking Mechanism
-  Ergonomic Grip
-  Optimised for Field Work

HOW TO USE

Step 1
Turn the trigger actuator out of the way so there is clearance for the aerosol can to be inserted.

Step 2
Insert aerosol can into can holder. Note: Only compatible with cans which have the upright/inverted spray nozzle (Trigger Cap), as shown.

Step 3
Align the trigger actuator with the cap trigger. In this position, when the string (not included) is pulled, the aerosol can will be actuated.

Step 4
Twist the shaft to enable the handle to be extended to the desired length. Twist it to lock it back into position.

* String is not included in this product.

SKU TPP
Standard
2.44m - 4.88m

SKU TPP-LARGE
Extended version
